The creation of the IOWAN was an incredible and joyful project! Blending an idea conceived by consultants at the Iowa Department of Education with data gathered by occupational therapists and occupational therapy assistants at Iowa’s Area Education Agencies produced the dazzling outcome of this project. Students and educators at an Iowa Occupational Therapy University Program joined in the project as well. The IOWAN is truly a “grass roots” research project developed to assist occupational therapists, and others, in screening student’s handwriting.

So many wonderful people provided their time, energy and skills to this project. First, we would like to thank the hard-working individuals who found the time during their busy work day to collect data across Iowa’s scholars. Our gratitude goes out also to their supervisors and special education directors who encouraged and supported their staff. The AEA, school district, or university in which they were employed or attending at the time of the norming is listed behind their name:
